Individual, exam-style questions

The questions contained in this booklet match the style of questions that are typically asked in exams. This booklet is not however, a practice exam. Elevate's research with top students identified that top students do more practice questions than anyone else. They begin the process of testing their knowledge early in the year.

Therefore, we have provided exam-format questions that are sorted by topic so that you can answer them as you learn the information, rather than waiting until the very end of the year to complete exams.

Comments, questions?

Let us know if you need any further advice by visiting www.elevateeducation.com. You can comment on any of our material, or head to the FAQ section and ask us a question. Also, you can find us on social media so you can stay up to date on any brand new tips we release throughout the year.

Other information

Every effort has been made to ensure the accuracy of the information expressed in this booklet, but no warranty or fitness is implied. 6. Explain why Sperry (1968) argued that his studies gave considerable support to his

argument of lateralisation of function. (OCR Psychology AS Unit 2; 4 marks)

10 mark qns

1. Emily is a psychologist who is interested in the effects of noise level on children's concentration. To test her hypothesis, Emily uses stratified sampling to select students from a pool of schools in London. She uses a repeated measures design. First, participants are asked to read a passage in a noisy environment. Emily then tests their memory of the passage. Then, she puts all of the participants into a room that's quiet and has them read another passage. Emily then tests their memory of the passage in the quiet environment and compares her results.
 - a. Evaluate the reliability and validity of Emily's study. (OCR Psychology AS Unit 1; 10 marks)
 - b. A research team want to replicate Emily's study, looking at how noise affects memory recall. Describe and evaluate a way to measure 'memory recall' that could be used in this study. (OCR Psychology AS Unit 1; 10 marks)
